

WHAT DOES THE APPLICATION PROCESS FEEL LIKE?

There are a few different sensations which can be experienced during the application process. While the solution is being applied to the skin, you may experience some or all of the following, but rest assured these sensations are all normal, and are designed to initiate the controlled peeling process which will reveal your youthful skin beneath.

During application you may experience:

- Heat
- A stinging sensation.

These sensations will be closely monitored by your DMK Skin Technician who will support you with the following:

- Fanning the skin
- Pressure point massage.
- Cold compresses

AM I A DMK PEEL CANDIDATE?

Since not everyone wants to commit to cosmetic surgery when signs of ageing, hyperpigmentation and scarring become apparent, many clients prefer a non-invasive alternative.

The DMK peels are recommended for anyone wanting to maintain or regain an even, youthful complexion – at any age. The peels can be applied to thick skin, uneven textured skin, wrinkles, fine lines, pigmentation, sun damage, and scarring.

PRE AND POST-TREATMENT

Each peel requires its own preparation and skin support program. This program will be tailored to you and your specific needs. For example, an acne-scarred client will prepare for a peel differently than one seeking treatment for hyper-pigmentation.

Generally, most clients will prepare the skin with a number of Enzyme Therapy Treatments – to strengthen the skin and encourage optimal skin functioning. Healthy skin heals well!

Pre and post-home care are also a requirement to ensure optimal results. These home care regimes may include DMK's signature cleansers, serums, oils, and nourishing crèmes. It is also important to use a daily SPF, such as DMK Soleil Defence SPF50+ as well as DMK's signature essential fatty acid supplement, EFA Ultra. Your DMK Skin Technician will prescribe your regime for you.

Peel away
ageing
skin

DMK
Danné Montague-King®

Are you ready for younger-looking skin?

Look 10 years younger in 10 days, with one of DMK's signature peels!

As we age, our skin begins to show the signs of environmental damage – mostly caused by the sun and environmental stressors. The good news is, that with an expertly developed skin treatment and product regime, we can rewind the clock and undo some of this damage. DMK's Pro Alpha Peel and Remodelling Procedure (RP) are both designed to lift away layers of sun-damaged, pigmented, ageing skin – revealing a much younger-looking you, quickly. Scarring can also be revised.

CAUSE AND EFFECT OF SKIN AGEING

The causes of ageing are both natural, and environmental.

Environmental damage occurs due to lifestyle choices, and exposure to the elements. The largest cause of premature ageing is the impact of sun exposure, and the effect that it has on our skin in the way of wrinkling, sun spots, and pigmentation. Poor diet, busy lifestyles, and pregnancy (hormones), can also impact the quality, texture, and tone of our skin in a negative way.

Natural signs of ageing are those that occur due to slowed fibroblast activity (elastin, Glycosaminoglycan's, and collagen). Tissue remodelling slows down, the skin begins to sag, and certain areas of the face start to show the signs of fine lines, wrinkles, and sagging.

DMK OFFERS TWO HIGH-LEVEL PEELS

Both peels involve a similar technique, with some downtime included. Both are designed to work quickly and effectively when combined with the correct preparation, and after care.

Remodelling Procedure (RP)

The DMK RP is designed to revise the underlying condition of the skin with the aim of encouraging a strong, healthy-looking skin which functions as if it were younger.

The RP is designed for those who suffer from:

- Poor functioning skin
- Pigmentation
- Acne scarring
- Uneven skin tone
- Premature ageing
- Sun damage & dark circles

Pro Alpha Peel

The DMK Pro Alpha Peel is an intensive resurfacing procedure designed to encourage the removal of damaged layers of skin.

The Pro Alpha Peel is designed for those who suffer from:

- Leathery skin
- Open pores
- Premature ageing
- Scarring
- Loose sagging skin
- Wrinkles

© Skin for Life

THE PEEL PROCESS

DAY 1	Application of Pro Alpha or RP solution. This will feel hot and skin will appear shiny and red post-treatment.
2	2nd application of Pro Alpha or RP solution. This application will feel slightly more intense than the previous day.
3-4	Skin may begin to peel, redness is still apparent.
5	1st Lift-off Treatment. This involves an Enzyme Treatment followed by a Transepidermal Infusion to nourish the skin.
6-9	Dead skin will continue to shed.
10	2nd Lift-off Treatment and infusion.

HOME PRESCRIPTIVES

To prepare for the peel, before, during and after the following Home Prescriptives are recommended:

- EFA Ultra
- Revitosin
- Super Bright
- A DMK cleanser
- Beta Gel
- Direct Delivery Vitamin C
- Herbal Pigment oil
- Herb & Mineral Mist
- Contraderm
